

Illustrations

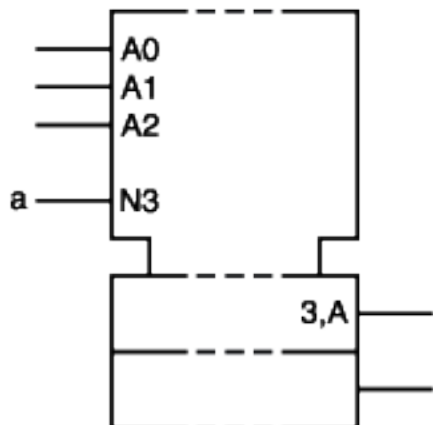

Array of 16 sections, each 4 pulse-triggered D-bistables (see A00304).

A particular section (among 8) is selected if it is selected by both sets of Am-inputs.

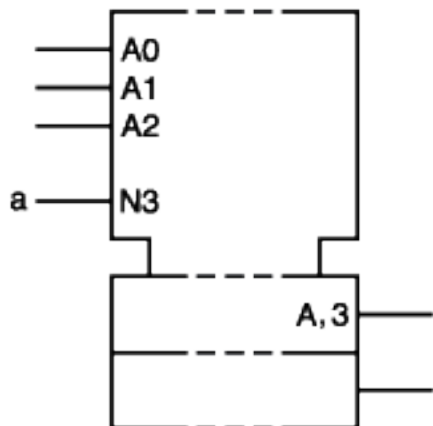

A particular section (among 8) is selected if it is selected either by one or by both sets of Am-inputs.

Suppose $a = 1$

The internal logic states of the outputs of the array are the results of the OR functions of the complements of the logic states of the outputs of the selected sections.

Suppose $a = 1$

The internal logic states of the outputs of the array are the complements of the results of the OR functions of the logic states of the outputs of the selected sections.
